Your 2699 repeated Berlin 925; Your despatch 1742 and 1784

1. Tripartite working level discussions Washington reveal agreement on following points first reference despatch:

Provisions Alternate One for augmented radio and radar facilities understood already underway. Additionally, provision should be made for broad-casting of corridor flight plans on frequencies audible in East Germany for all Allied aircraft traveling between Federal Republic and Berlin.

US and British feel provisions Alternate Two (telephone to Karlshorst and teletype to East Lufthansa ticket office) should be further explored by three Embassies from standpoint of practicability, bearing in mind either facility could be cut, ignored, or relay of messages to air controllers so long delayed by recipients as to be no longer useful. French still do not favor going beyond broadcasting.

Alternate Three not under active consideration but British would agree if agency relationship clearly recognized.

We are requesting authority to inform British and French officially of foregoing US views. Defense concurs.

2. Aviation

Drafted by:
